Les carcinoïdes broncho-pulmonaires

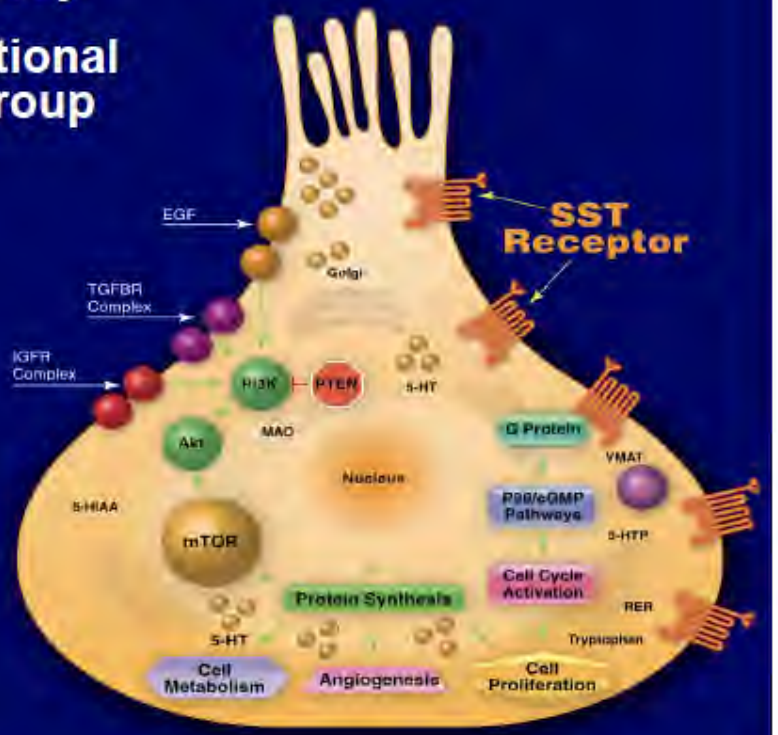
Les tumeurs carcinoïdes

Les tumeurs neuro-endocrines

Neuroendocrine Tumors (NETs): A Diverse Group of Malignancies, a Clinical Challenge

- Neuroendocrine cells: migrated from the neural crest to the gut endoderm, from multipotent stem cells
- Tumors arising from enterochromaffin cells located in neuroendocrine tissue throughout the body
- NETs present with functional and nonfunctional symptoms and include a heterogeneous group of neoplasms[1,2]
  - Multiple endocrine neoplasia (MEN)de, type 1 and type 2/medullary thyroid carcinoma
  - Gastroenteropancrtic neuroendocrine tumors (GEP-NETs)
  - Islet cell tumors
  - Pheochromocytoma/paraganglioma
  - Poorly differentiated/small cell/atypical lung carcinoid
  - Small cell carcinoma of the lung
  - Merkel cell carcinoma



Les tumeurs neuro-endocrines pulmonaires

- Cellules de Kulchitsky

- Capteurs système nerveux végétatif
  - Contrôle de la ventilation
  - Contrôle de la circulation
  - Chemo- et mécanorécepteurs
- Rôle dans le développement

- Capacité à métaboliser la L-DOPA et le 5-hydroxytryptophane

Classification des tumeurs neuro-endocrines pulmonaires

WHO 2004	Typical carcinoid	Atypical carcinoid	Large cell neuroendocrine carcinoma	Small cell neuro-endocrine carcinoma
Differentiation	Well	Well	Poor	Poor
Cell size			>20 µm	< 20 µm
Necrosis	Absent	Possible, focal	Jsual, extensive	Frequent
Mitotic index	< 2 mitoses /10 HPF (2 mm²)	2 – 10 mitoses /10 HPF (2 mm²)	> 10 mitoses /10 HPF (2 mm²)	> 10 mitoses /10 HPF (2 mm²)

Mots-clés : Carcinoid, Atypical carcinoid, Small cell carcinoma, Large cell neuroendocrine carcinoma, Mitoses

Survival Analysis of 200 Pulmonary Neuroendocrine Tumors With Clarification of Criteria for Atypical Carcinoid and Its Separation From Typical Carcinoid

Travis, William D. M.D.; Rush, Walter M.D.; Flieder, Douglas B. M.D.; Falk, Roni M.S.; Fleming, Marian V. J.D., M.D.; [illegible] Anthony A. M.D.; Koss, Michael N. M.D.

WHO 2004	Typical carcinoid
Differentiation	Well
Cell size	
Necrosis	Absent
Mitotic index	< 2 mitoses /10 HPF (2 mm²)

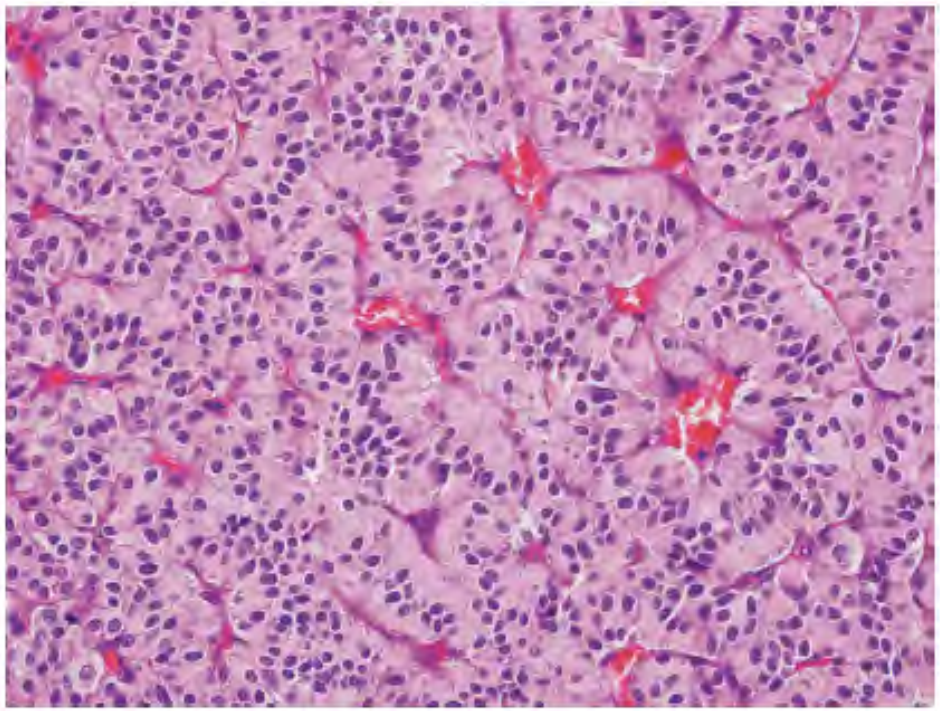

Figure. 1. Typical carcinoid. This tumor shows an organoid nesting pattern with a prominent vascular stroma. The tumor cells are uniform with a moderate amount of eosinophilic cytoplasm and finely granular nuclear chromatin. No necrosis or mitoses are seen.

Am J Surg Pathol 1998; 22:934

Mots-clés : Carcinoid, Atypical carcinoid, Small cell carcinoma, Large cell neuroendocrine carcinoma, Mitoses

Survival Analysis of 200 Pulmonary Neuroendocrine Tumors With Clarification of Criteria for Atypical Carcinoid and Its Separation From Typical Carcinoid

Travis, William D. M.D.; Rush, Walter M.D.; Flieder, Douglas B. M.D.; Falk, Roni M.S.; Fleming, Marian V. J.D., M.D.; Gal, Anthony A. M.D.; Koss, Michael N. M.D.

WHO 2004	Typical carcinoid	Atypical carcinoid
Differentiation	Well	Well
Cell size		
Necrosis	Absent	Possible, focal
Mitotic index	< 2 mitoses /10 HPF (2 mm²)	2 – 10 mitoses /10 HPF (2 mm²)

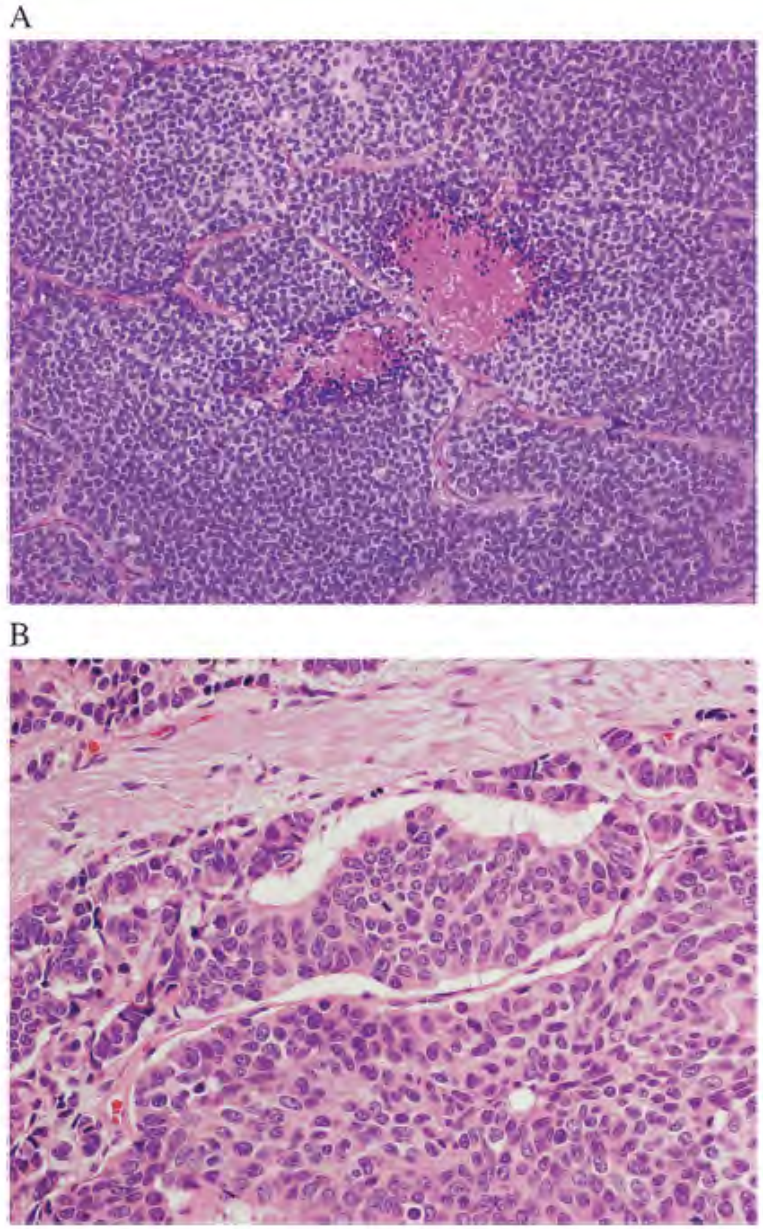

Figure. 2. (A) Atypical carcinoid. This tumor shows a punctate focus necrosis within sheets and nests of carcinoid tumor cells. (B) There is a single mitosis (center) in one tumor cell. The cells have finely granular nuclear chromatin.

Am J Surg Pathol 1998; 22:934

Mots-clés : Carcinoid, Atypical carcinoid, Small cell carcinoma, Large cell neuroendocrine carcinoma, Mitoses

Survival Analysis of 200 Pulmonary Neuroendocrine Tumors With Clarification of Criteria for Atypical Carcinoid and Its Separation From Typical Carcinoid

Travis, William D. M.D.; Rush, Walter M.D.; Flieder, Douglas B. M.D.; Falk, Roni M.S.; Fleming, Marian V. J.D., M.D.; Gal, Anthony A. M.D.; Koss, Michael N. M.D.

WHO 2004	Typical carcinoid	Atypical carcinoid	Large cell neuroendocrine carcinoma
Differentiation	Well	Well	Poor
Cell size			>20 µm
Necrosis	Absent	Possible, focal	Jsual, extensive
Mitotic index	< 2 mitoses /10 HPF (2 mm²)	2 – 10 mitoses /10 HPF (2 mm²)	> 10 mitoses /10 HPF (2 mm²)

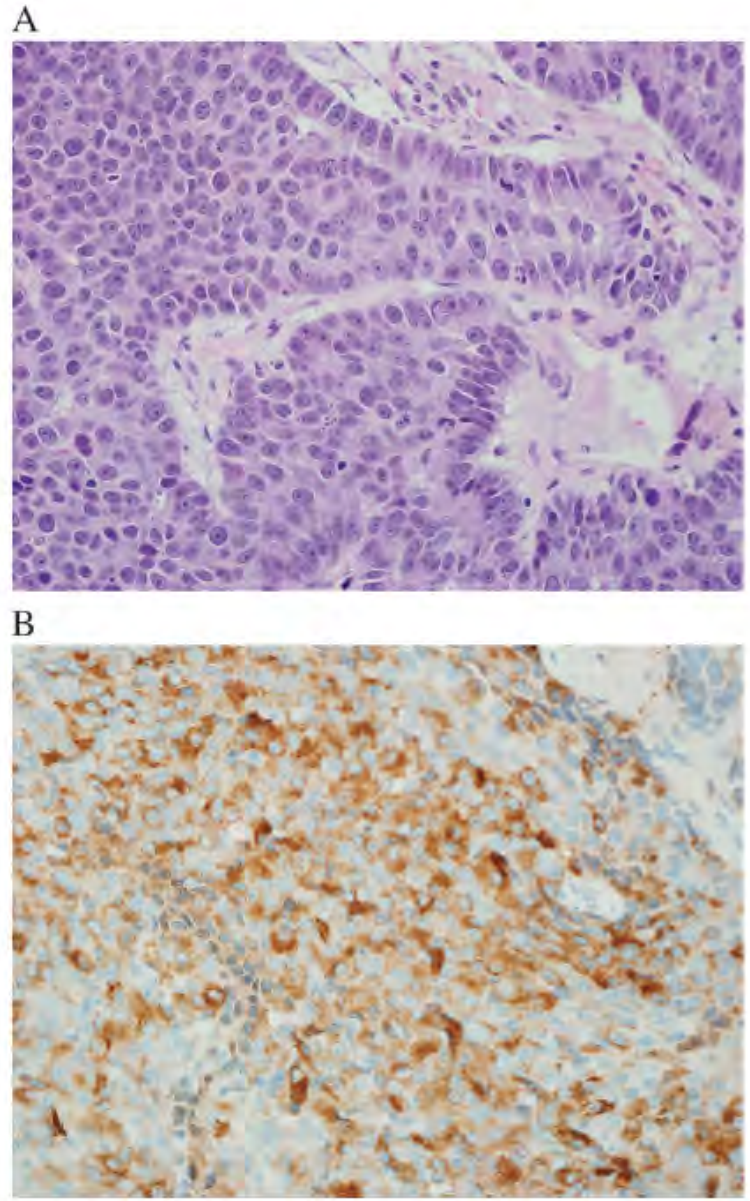

Figure. 3. Large-cell neuroendocrine carcinoma. (A) The tumor grows in sheets with prominent peripheral palisading and vague rosette-like structures. Several mitoses are seen. The tumor cells have abundant cytoplasm, prominent nucleoli. (B) Chromogranin strongly stains the tumor cells.

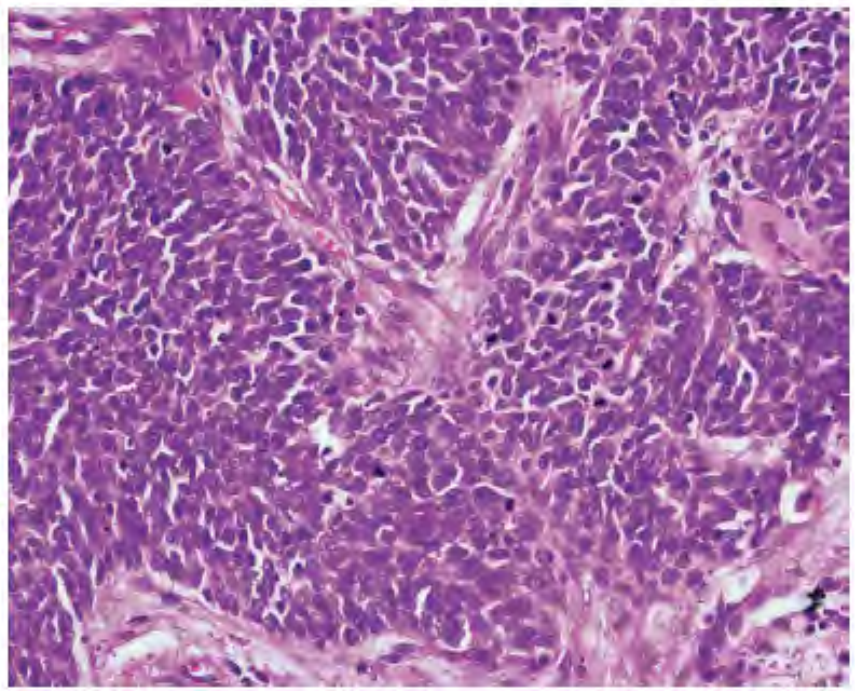
Am J Surg Pathol 1998; 22:934

Mots-clés : Carcinoid, Atypical carcinoid, Small cell carcinoma, Large cell neuroendocrine carcinoma, Mitoses

Survival Analysis of 200 Pulmonary Neuroendocrine Tumors With Clarification of Criteria for Atypical Carcinoid and Its Separation From Typical Carcinoid

Travis, William D. M.D.; Rush, Walter M.D.; Flieder, Douglas B. M.D.; Falk, Roni M.S.; Fleming, Marian V. J.D., M.D.; Gal, Anthony A. M.D.; Koss, Michael N. M.D.

WHO 2004	Typical carcinoid	Atypical carcinoid	Large cell neuroendocrine carcinoma	Small cell neuro-endocrine carcinoma
Differentiation	Well	Well	Poor	Poor
Cell size			>20 µm	< 20 µm
Necrosis	Absent	Possible, focal	Jsual, extensive	Frequent
Mitotic index	< 2 mitoses /10 HPF (2 mm²)	2 – 10 mitoses /10 HPF (2 mm²)	> 10 mitoses /10 HPF (2 mm²)	> 10 mitoses /10 HPF (2 mm²)



. 4. Small-cell carcinoma. This tumor consists of dense sheets of ells with scant cytoplasm, finely granular nuclear chromatin, frequent s; nucleoli are inconspicuous or absent.

Am J Surg Pathol 1998; 22:934

Mots-clés : Carcinoid, Atypical carcinoid, Small cell carcinoma, Large cell neuroendocrine carcinoma, Mitoses

Survival Analysis of 200 Pulmonary Neuroendocrine Tumors With Clarification of Criteria for Atypical Carcinoid and Its Separation From Typical Carcinoid

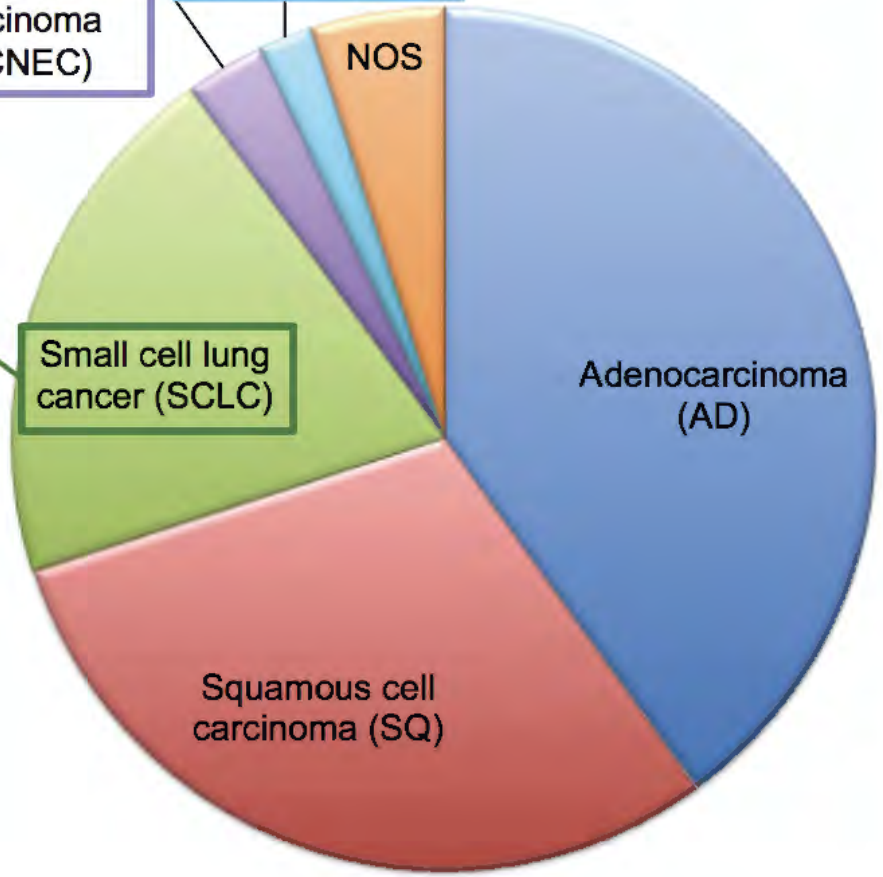
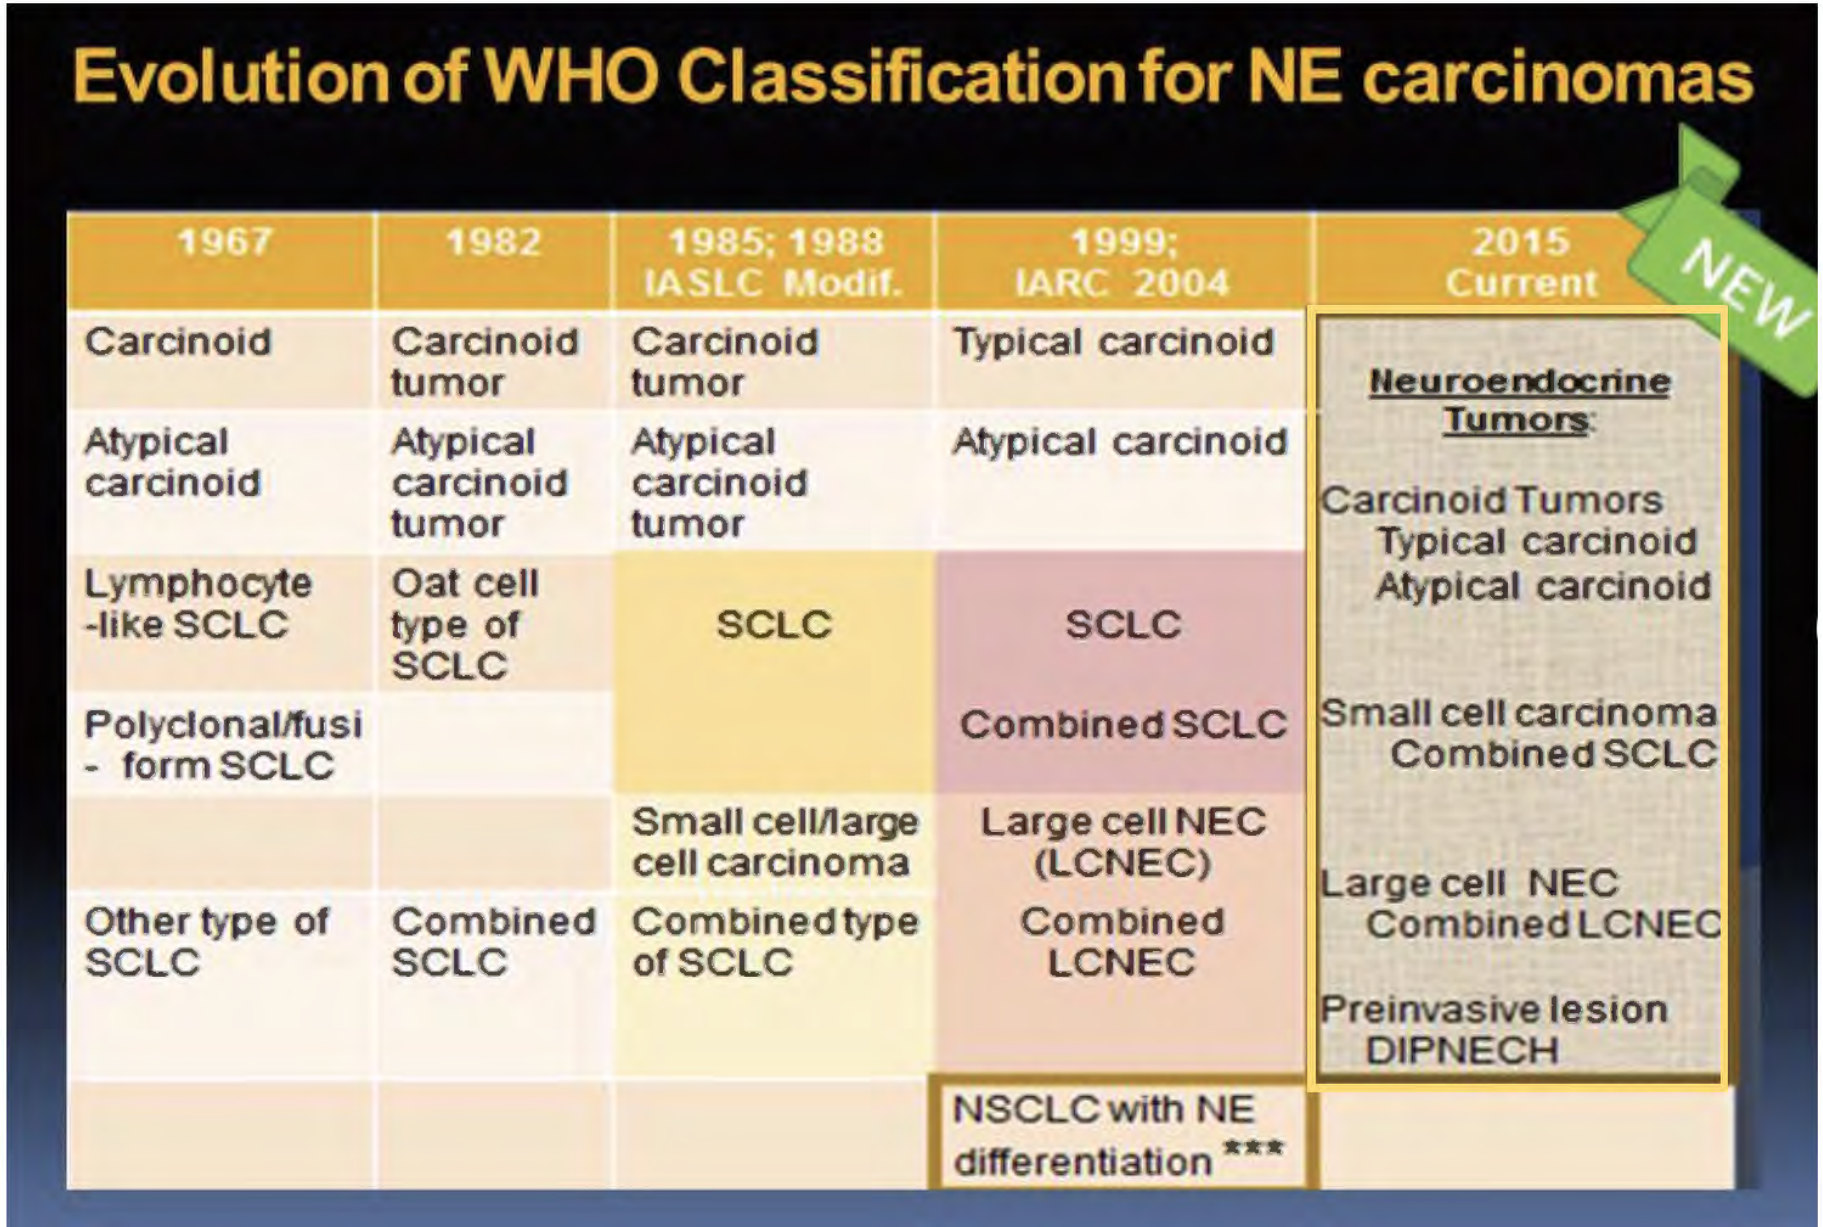
World Health Organization



Classification des tumeurs neuro-endocrines pulmonaires



TNE pulmonaires : faut-il changer la nomenclature ? (1)

- La classification actuelle est celle de l'OMS 2004, basée sur l'histologie
  la classification 2015 sera inchangée pour la nomenclature

Classification OMS 2004 et 2015

Dénomination	Tumeurs malignes pulmonaires (%)	Malignité
Carcinoïde typique	2	Faible
Carcinoïde atypique	0,2	Intermédiaire
Carcinome neuroendocrine à grandes cellules	3	Élevée
Carcinome neuroendocrine à petites cellules	15	

- **Faut-il une classification basée sur le grade comme dans les TNE digestives ?**
- Les TNE pulmonaires sont réparties en 3 catégories plutôt que 4
  - Plan épidémiologique
  - Plan clinique
  - Plan évolutif

G1 si 2 ou 3 variables N1
G2 si 2 ou 3 variables N2
G3 si 2 ou 3 variables N3

Proposition de classification basée sur la prolifération et la nécrose

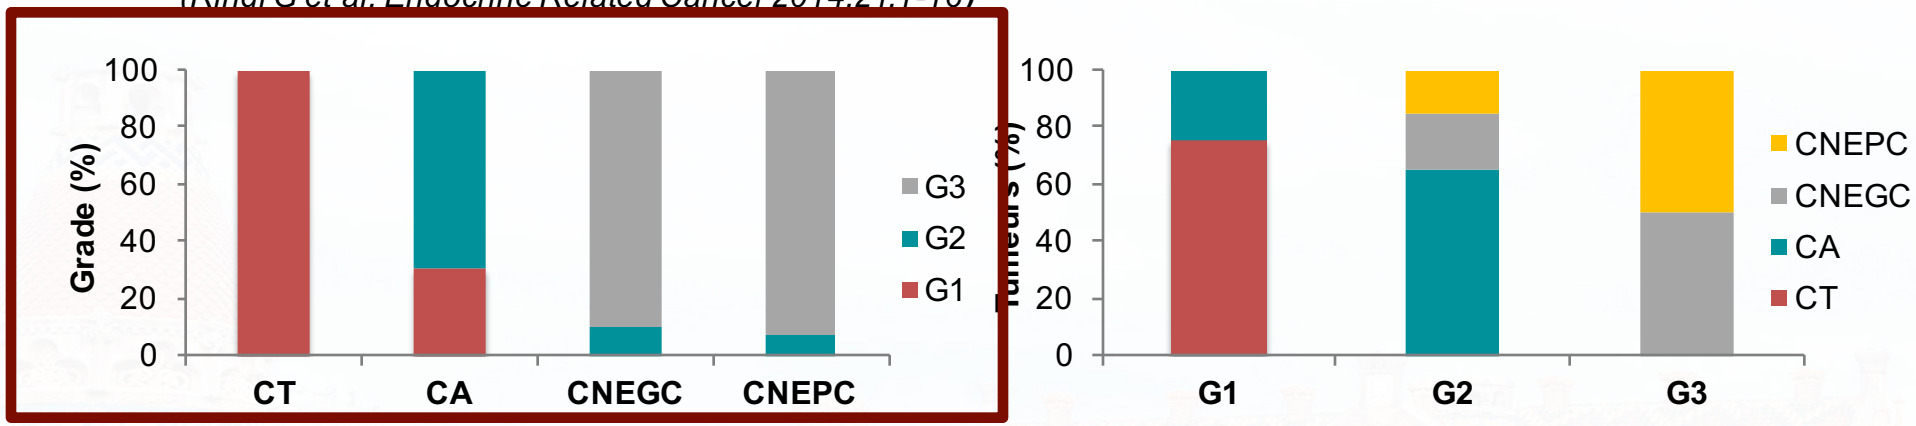
	Variable					
	Index mitotique		Ki67		Nécrose	
G1	2	N1	< 4 %	N1	Non	N1
G2	> 2 - 47	N2	4-25 %	N2	< 10 %	N2
G3	> 47	N3	≥ 25 %	N3	> 10 %	N3

ENETS 2015 - D'après Pelosi G et al., Session 7 actualisé

TNE pulmonaires : faut-il changer la nomenclature ? (2)

- 348 tumeurs : 105 carcinoïdes typiques (CT), 75 carcinoïdes atypiques (CA), 86 carcinomes neuroendocrines à grandes cellules (CNEGC) et 82 carcinomes neuroendocrines à petites cellules CNEPC

(Rindi G et al. Endocrine Related Cancer 2014;21:1-16)



- Nécessité d'intégrer le grade aux autres facteurs
  - Grade 1 (bien différenciée, de bas grade) : CT ou CA
  - Grade 2 (bien ou moyennement différenciée, grade intermédiaire) : CA, parfois CNEGC et quelques cas de CPC
  - Grade 3 (moyennement à non différencié, haut grade) : CNEGC ou CPC, mais aussi quelques rares cas de CA

➜ **Une classification basée sur le grade permettrait de mieux évaluer l'agressivité tumorale pour guider le traitement**

TNE pulmonaires : faut-il changer la nomenclature ? (2)

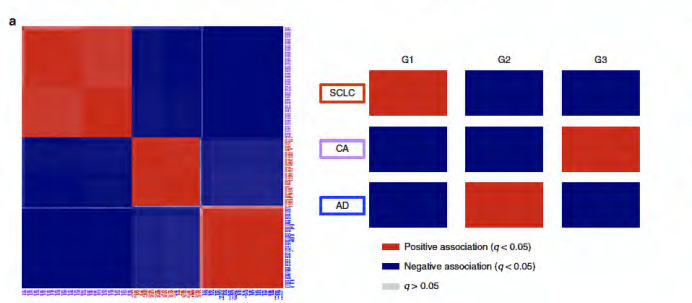

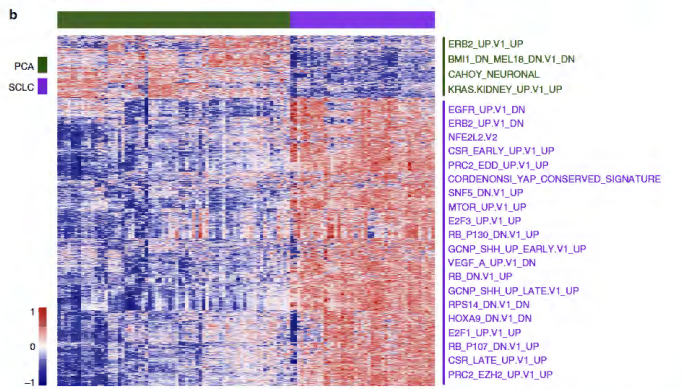

Figure 3 | Expression data analysis of pulmonary carcinois based on RNAseq data. (**a**) Consensus k-means clustering[32,33] using RNAseq expression data of 49 adenocarcinomas (AD, in blue), 43 small-cell lung cancer (SCLC, in red) and 69 pulmonary carcinoids (PCA, in purple) identified three groups using the clustering module from GenePattern[31] and consensus CDF[32,33] (left panel). The significance of the clustering was evaluated by using SigClust[34] with a $P < 0.0001$. Fisher's exact test[35] was used to check associations between the clusters and the histological subtypes (right panel). (**b**) Gene set enrichment analysis[21] for SCLC versus PCA using RNAseq expression data. Low gene expression is indicated in blue and high expression, in red. On the right side are given the altered pathways in PCA (green) and SCLC (purple).

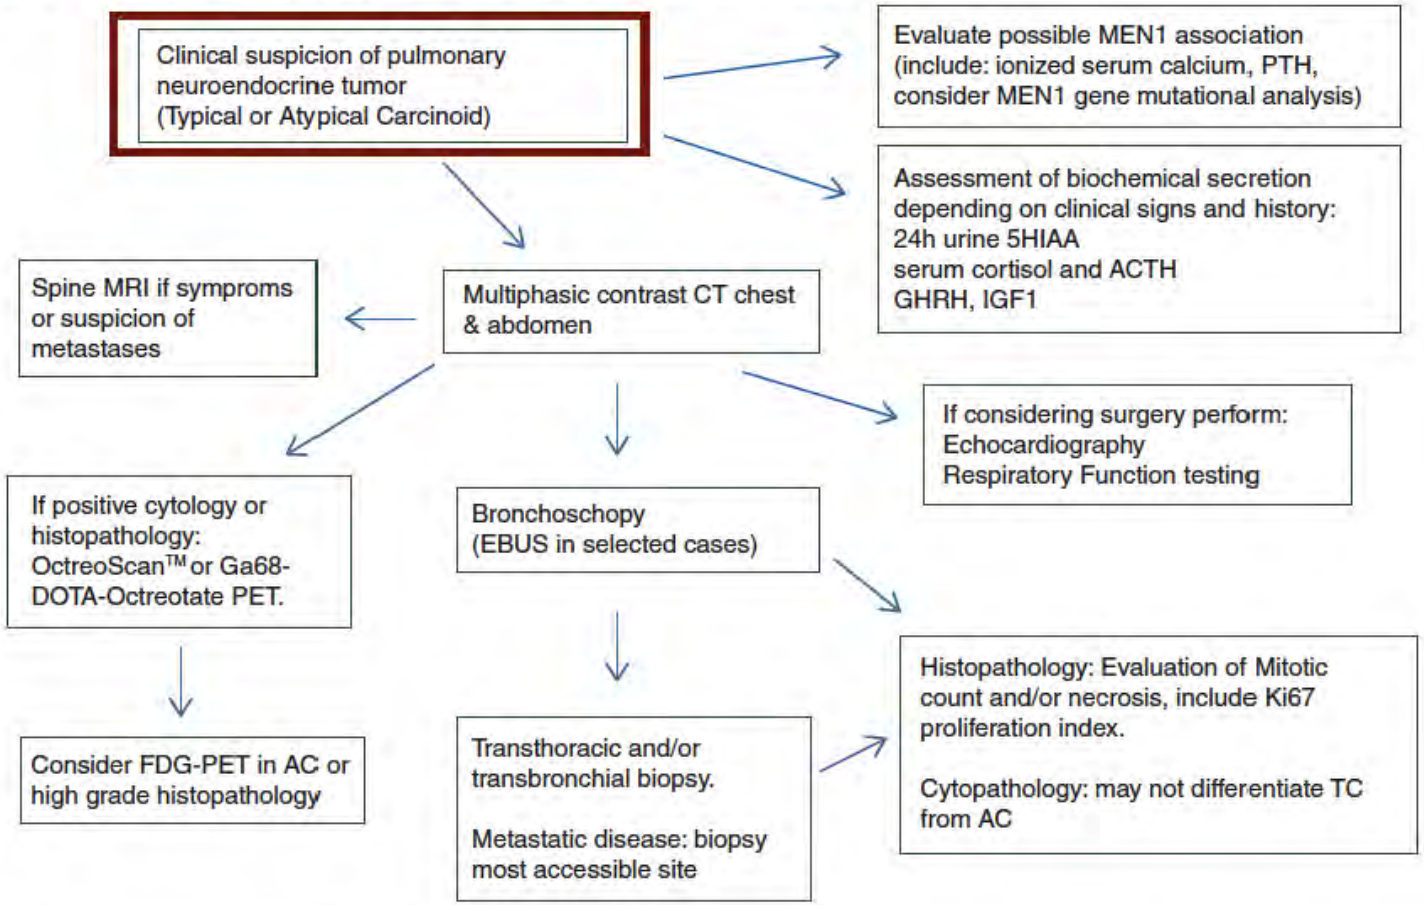

Figure 1. Algorithm for diagnosis of pulmonary neuroendocrine tumor.

Aspects tomodensitométriques et endoscopiques

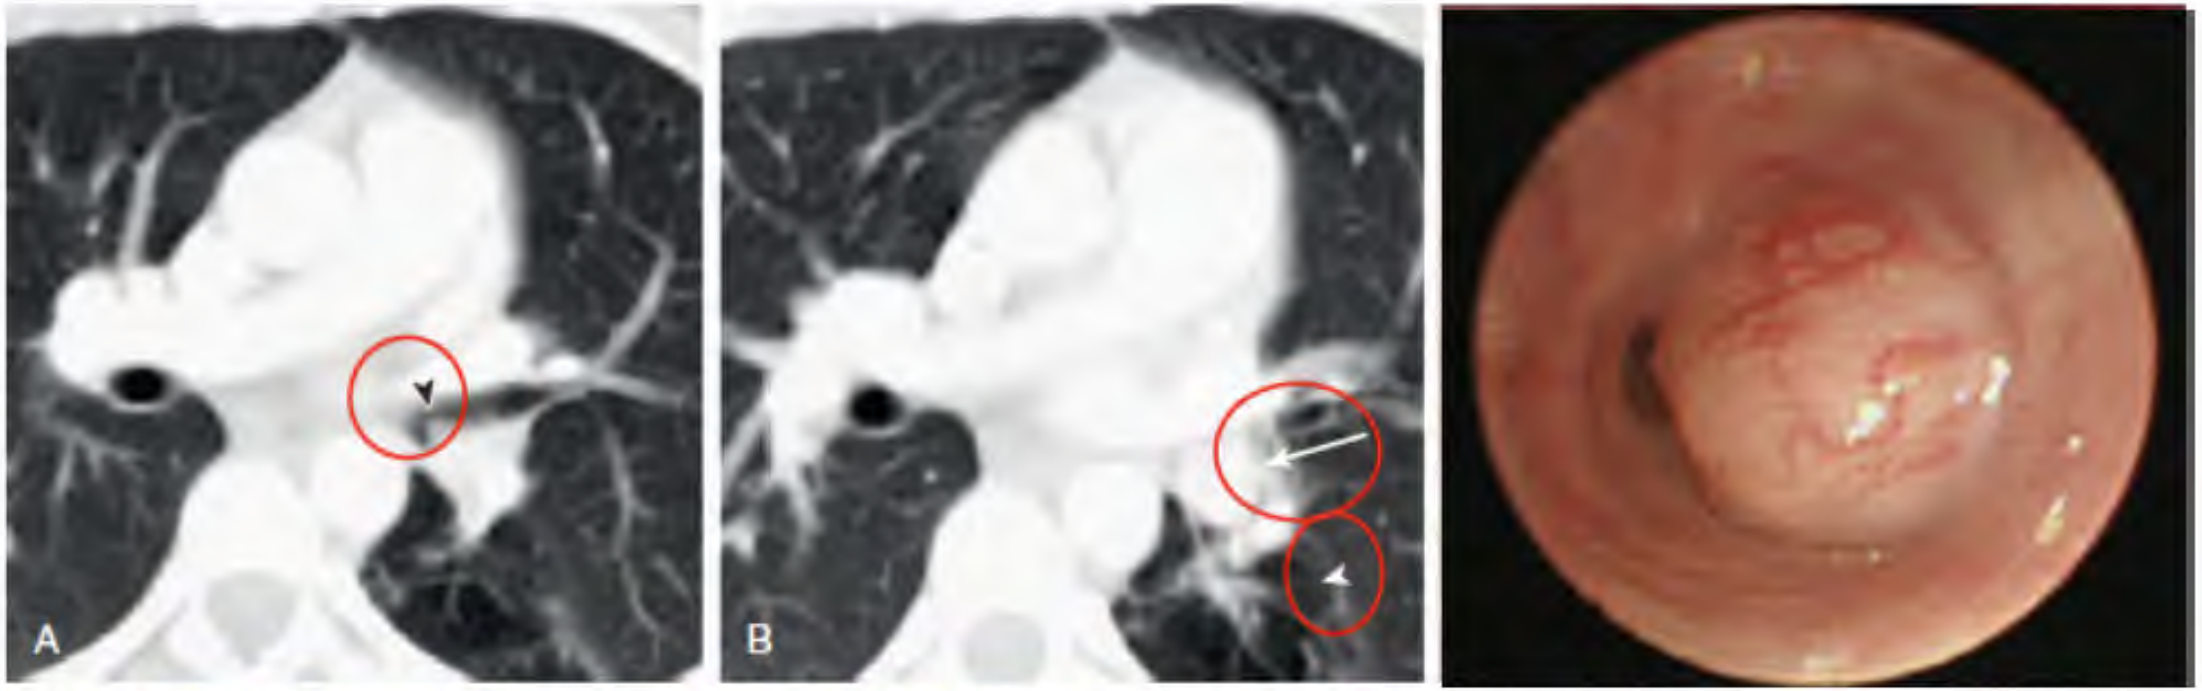

Figure 54-2 "Typical" carcinoid tumor: "iceberg-like" endobronchial mass. **A** and **B,** Axial chest CT displayed in lung windows in a 32-year-old woman with recurrent pneumonia shows complete obstruction of the left lower lobe bronchus (**B,** *arrow*), with a small portion of tumor protruding into the left mainstem bronchus (**A,** *arrowhead*), in a manner analogous to the small portion of an iceberg that protrudes above the ocean water. Left lower lobe postobstructive air trapping (**B,** *arrowhead*) is present, which confirms an airway origin for the lesion. **C,** Bronchoscopic image shows the left lower lobe lesion protruding into the left mainstem bronchus.

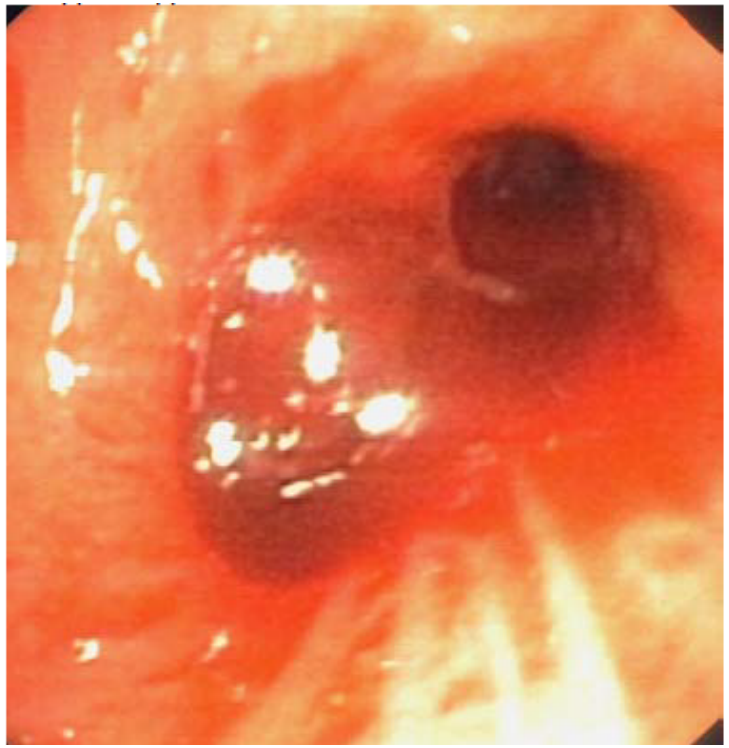
Aspects endoscopiques

- Risque de saignement: 0,3% décès
- S'y préparer: épinéphrine

- Rôle de la bronchoscopie rigide et du laser?

- Thoracotomie d'emblée?



Diagnostic histo-pathologique sur petites biopsies?

- Diagnostic de carcinoïde: 70% des cas

- Risque d'erreur diagnostique: 10% des cas
  - Carcinome à petites cellules
  - Carcinome épidermoïde

- Différentiation entre carcinoïde typique et atypique: 40% des cas

AUDIT, RESEARCH AND GUIDELINE UPDATE

Test performance of PET-CT for mediastinal lymph node staging of pulmonary carcinoid tumours

Holly A Pattenden,[1] Maria Leung,[1] Emma Beddow,[1] Michael Dusmet,[1] Andrew G Nicholson,[1,2] Michael Shackcloth,[3] Saifullah Mohamed,[4] Adnan Darr,[4] Babu Naidu,[4] Swetha Iyer,[5] Adrian Marchbank,[5] Amy Greenwood,[6] Doug West,[6] Felice Granato,[7] Alan Kirk,[7] Priyadharshanan Ariyaratnam,[8] Mahmoud Loubani,[8] Eric Lim,[1,2] on behalf of the UK Thoracic Surgery Collaborative

For our primary outcome, the calculated sensitivity and specificity of ^{18}FDG PET-CT to identify mediastinal (N2) lymph node disease were 33% (95% CI 4% to 78%) and 94% (89% to 97%), respectively.

Table 1 Baseline characteristics

Sample size (n)	247

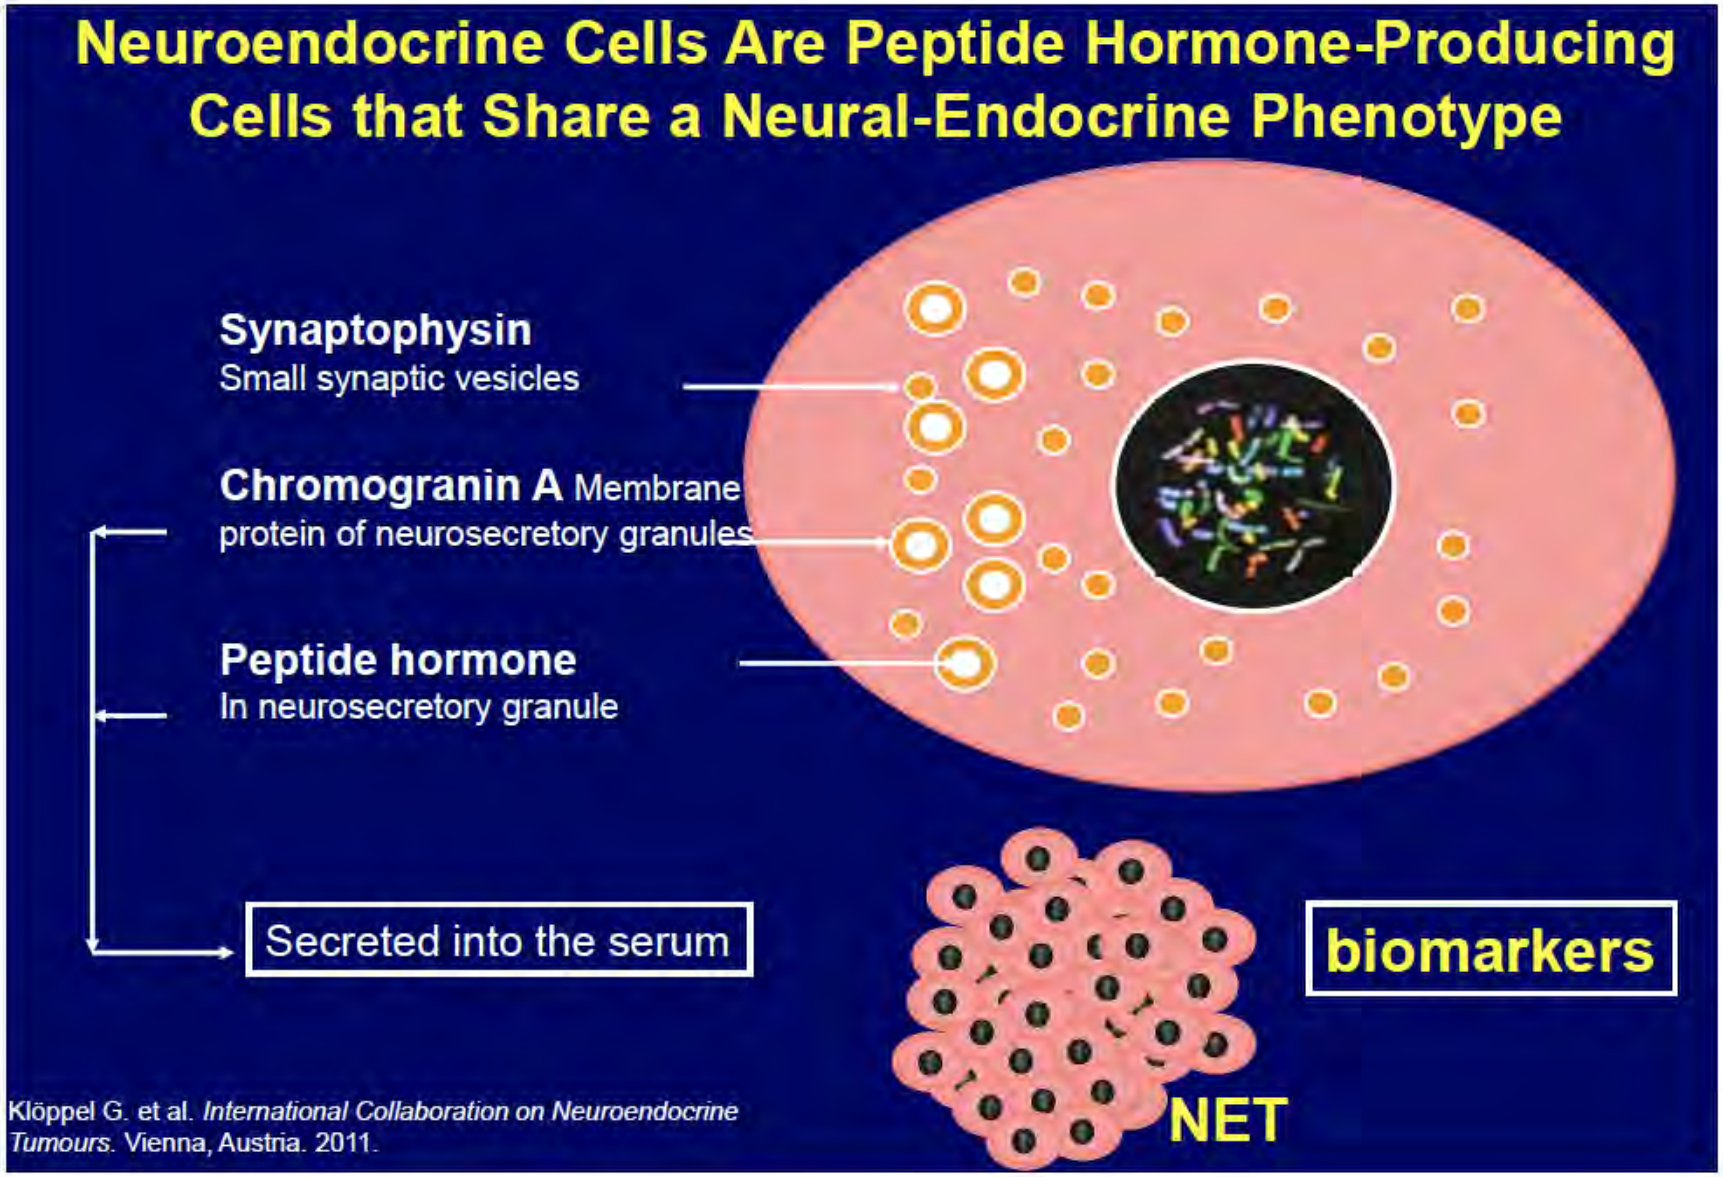
Bilan biologique



Bilan biologique

Carcinoid Syndrome

- Occurs in approximately 8% to 35% of patients with NETs and occurs mostly in cases of patients with hepatic metastases[1]
- Consequence of vasoactive peptides such as serotonin, histamine, or tachykinins released into the circulation[2,3]
- Manifested by episodic flushing, wheezing, diarrhea, and, potentially, the eventual development of carcinoid heart disease[2,3]

Percentage of patients with symptoms of carcinoid syndrome[4]

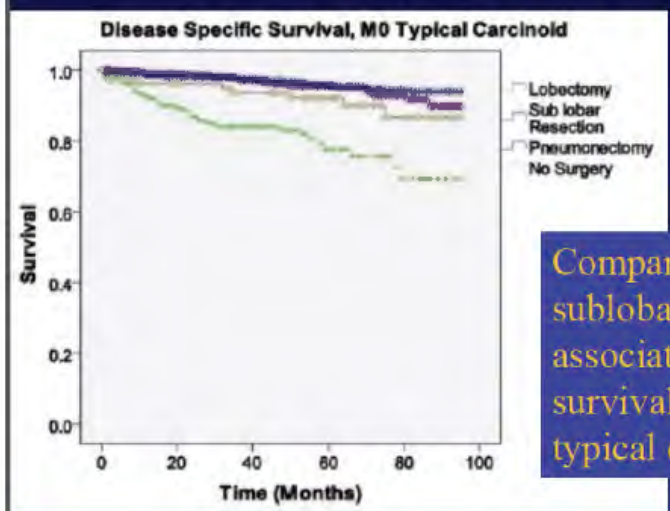
Is sublobar resection equivalent to lobectomy for surgical management of peripheral carcinoid?

Jonathan Afoke, Carol Tan, Ian Hunt and Mustafa Zakkar*

tabulated. A literature search showed that there is a good prognosis after resection of lung carcinoid with the 10-year disease-free survival rate ranging between 77 and 94%, and suggested that sub-lobar resection of a typical carcinoid did not compromise the long-term survival. The proportion of peripheral tumours ranged between 22.6 and 100% and the proportion of patients with a preoperative diagnosis of carcinoid ranged between 51.9 and 86.7%, with many series not providing either or both of these data. As a result, a lobectomy or greater resection was necessary on anatomical or diagnostic grounds and led to a low number of sub-lobar resections. Owing

Limited resection



Compared with lobectomy, sublobar resection is associated with noninferior survival in patients with typical carcinoid of the lung.

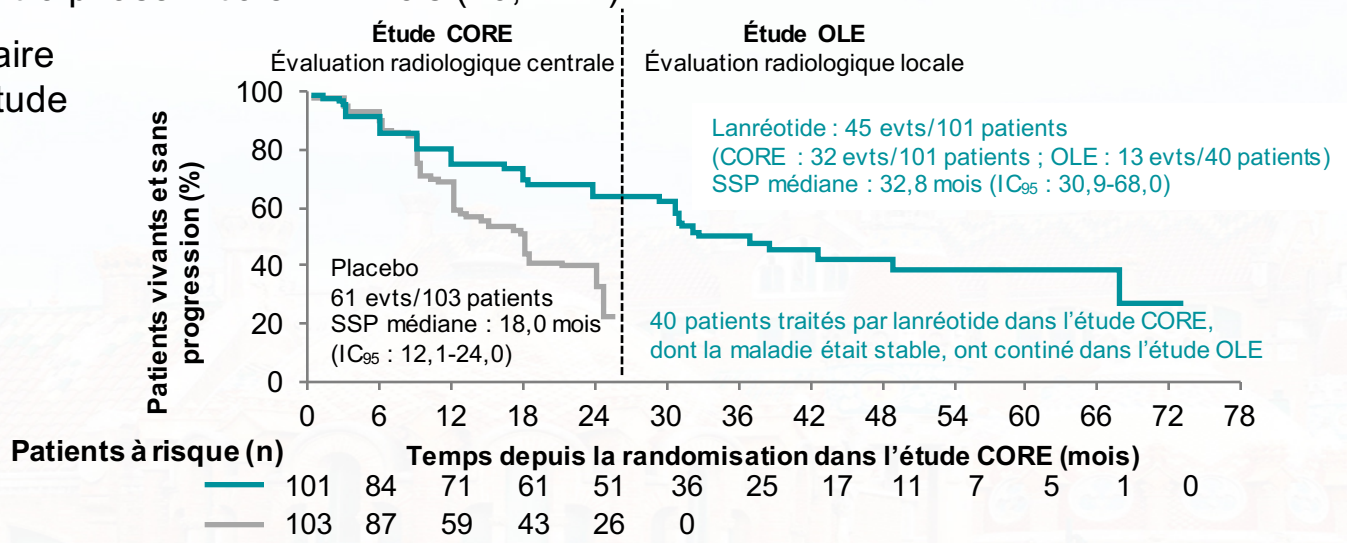
Résultats actualisés de l'étude CLARINET

Phase d'extension en ouvert

- Inclusion des patients de l'étude CLARINET si maladie stable ou progression (bras placebo uniquement), lors de la visite finale
- Traitement de tous les patients par lanréotide Autogel® 120 mg/mois
- SSP médiane des patients initialement sous lanréotide : 32,8 mois (IC_{95} : 30,9-68,0)
- Délai médian jusqu'à 2e progression des patients initialement sous placebo ayant progressé pendant la phase initiale : 14 mois (10,1-NA)
- Profil de tolérance similaire à celui observé dans l'étude initiale



➜ **Confirmation des données de l'étude CLARINET et activité anti-tumorale chez les patients ayant progressé sous placebo, et traités par lanréotide**

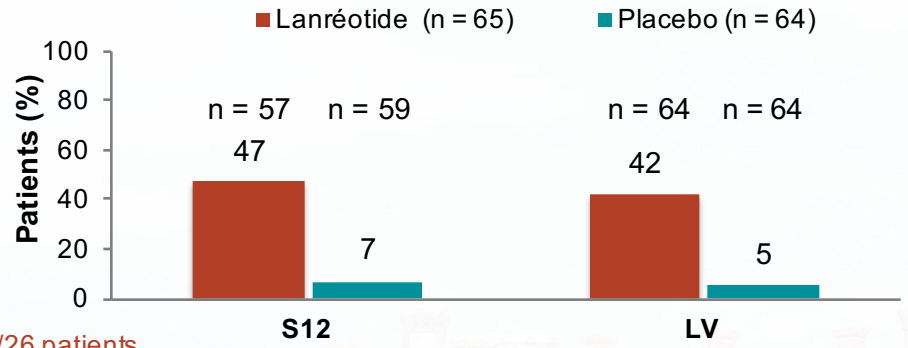
ENETS 2015 - D'après Caplin ME et al., Poster K2 actualisé

Chromogranine A (CgA) : facteur prédictif de réponse au traitement par lanréotide 120 mg

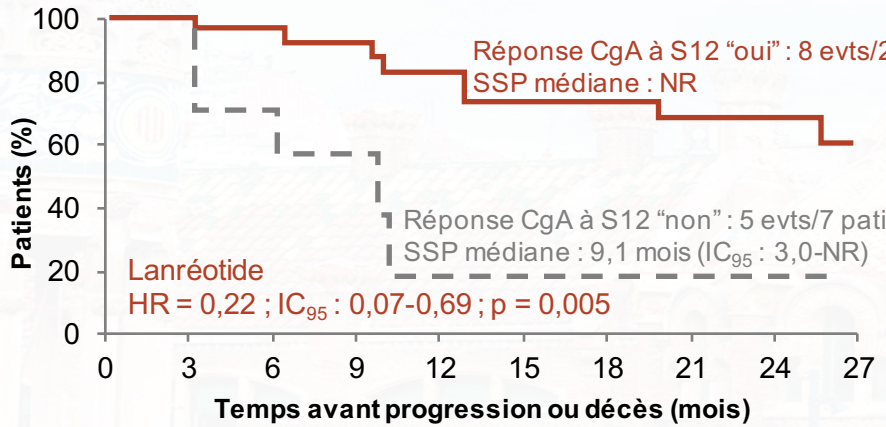
Analyse des données de l'étude CLARINET

- Réduction plus importante des taux de CgA sous lanréotide que sous placebo
- Les pourcentages de patients avec diminution de la CgA ≥ 30 % et ≥ 50 % étaient plus importants en cas de stabilisation qu'en cas de progression

Pourcentages de patients avec diminution ≥ 50% de la CgA à S12 et à la visite finale



SSP en fonction de la réponse CgA à S12*



N1/N2	26/7	26/7	23/4	21/3	18/1	15/1	15/1	14/1	10/1	0/0
C1/E1		0/0	2/1	3/2	4/4	5/6	5/6	5/7	9/7	18/8
C2/E2		0/0	0/3	1/3	1/5	1/5	1/5	1/5	1/5	2/5

- SSP significativement + longue en cas de réponse CgA précoce dans le bras lanréotide

* Diminution ≥ 30 % ou normalisation

➜ **Une diminution précoce de la CgA sous traitement par lanréotide pourrait être prédictive de la réponse au traitement**

Tumeurs non sécrétantes

An open-label, single-arm, multicenter, phase II study conducted in 16 European sites (ClinicalTrials.gov number NCT00688623)

Patients with advanced nonsyndromic, nonpancreatic NET

(ITT/safety population, N = 73; PP population, N = 60)

- Radiologic progression within 12 months before study entry
- Measurable disease at baseline (RECIST criteria, version 1.0)
- ECOG PS of 0-2
- Life expectancy ≥6 months
- Previous treatment with ≤3 systemic treatments allowed

→

Everolimus 10 mg/day orally

- Each cycle comprised 28 days of consecutive treatment with everolimus

Triphasic CT or MRI performed at baseline and every 12 weeks

→

Patients continued treatment until

- Tumor progression
- Occurrence of unacceptable toxicity
- Death
- Discontinuation due to any other reason

Primary Endpoint
- ORR as per RECIST by central radiologic review

Secondary Endpoints
- Disease control rate, PFS, OS, Sa

Follow-up: Every 28 days (after the last dose of everolimus) for AEs and SAEs; every 12 weeks for radiologic assessment

	Lung, Thymic, Bronchial, or Mediastinal n = 22
Median age, years (range)	56.5 (30.0-75.0)
Male/female sex, n (%)	7 (32)/15 (68)
Histologic grade, n (%)	
Well differentiated	9 (41)
Moderately differentiated	13 (59)
Ki67 ≥10%, n (%)	10 (63)

AE, adverse event; CT, computed tomography; ECOG, Eastern Cooperative Oncology Group; ITT, intention-to-treat; MRI, magnetic resonance imaging; ORR, objective response rate; OS, overall survival; PFS, progression-free survival; PP, per protocol; PS, performance status; RECIST, Response Evalu Criteria in Solid Tumors; SAE, serious adverse event.

Tumeurs non sécrétantes

TNE pulmonaires ou digestives (G1/G2), bien différenciées, avancées, progressives, non fonctionnelles (n = 302)

- Absence de syndrome carcinoïde (présent ou historique)
- Maladie avancée histologiquement prouvée
- Inclusion dans les 6 mois suivant la progression radiologique

2:1

R

- Evérolimus 10 mg/day (n = 205)
- Placebo (n = 97)

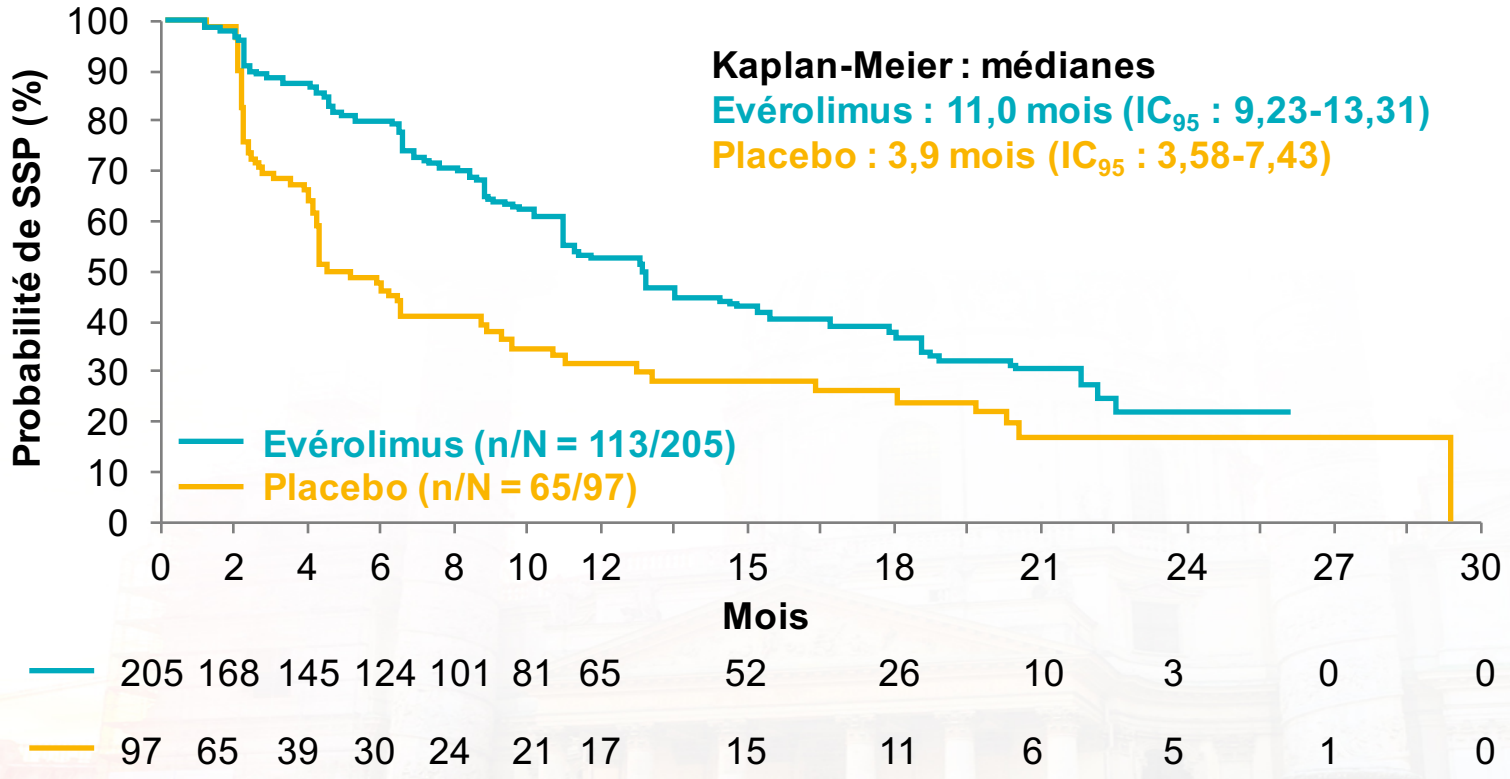
Traitement jusqu'à progression, toxicité inacceptable ou sortie volontaire du patient

- **Objectif(s) :**
  - **Principal : SSP (central)**
  - **Secondaires +++ : SG**
  - **Secondaires (autres) : RO, durée de la RO, tolérance, qualité de vie (FACT-G), PS, NSE/CgA, cinétique**
- **Stratification :**
  - **Traitement antérieur par analogue d ela somatostatine (oui versus non)**
  - **Origine de la tumeur (stratum A versus B)**
  - **PS (0 versus 1)**

ESMO 2015 - D'après Yao JC et al., LBA5, actualisé

Tumeurs carcinoïdes avancées
Everolimus: RADIANT-4

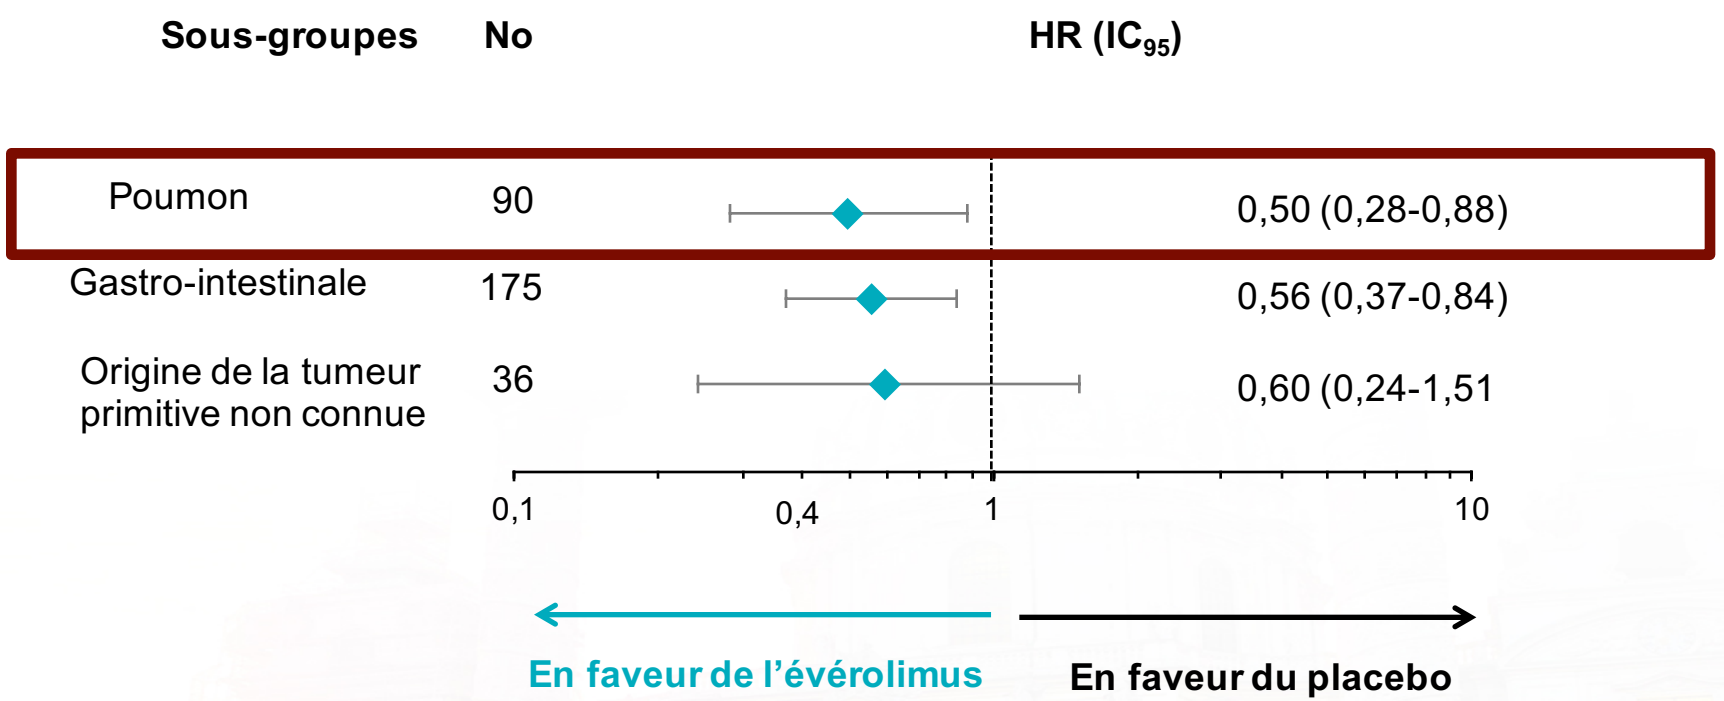
- **Réduction de 52 % du risque relatif de progression ou de décès avec l'évérolimus vs placebo**
- **HR = 0,48 (IC_{95} : 0,35-0,67) ; p < 0,00001**



ESMO 2015 - D'après Yao JC et al., LBA5, actualisé

Tumeurs carcinoïdes avancées
Everolimus: RADIANT-4

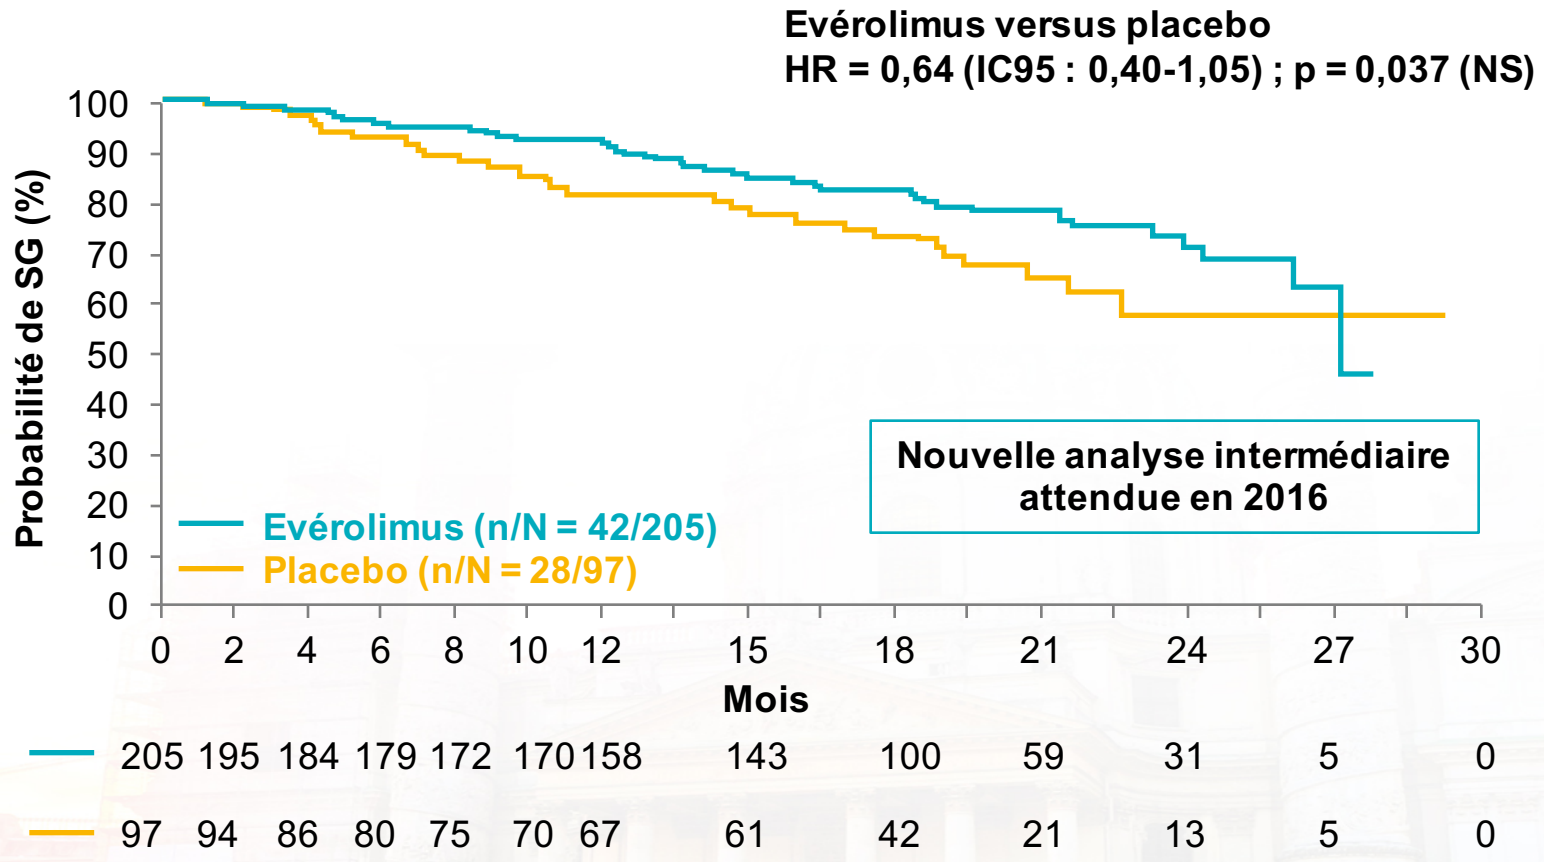
Tumeurs non sécrétantes



ESMO 2015 - D'après Yao JC et al., LBA5, actualisé

Tumeurs carcinoïdes avancées
Everolimus: RADIANT-4

- **Première analyse intermédiaire de la SG réalisée après 37% d'évènements : en faveur du bras Evérolimus**



ESMO 2015 - D'après Yao JC et al., LBA5, actualisé

Dans les carcinoïdes bronchiques:

Everolimus :

- Tumeurs sécrétantes
  - traitement de seconde ligne après échec d'analogues de la somatostatine pour les carcinoïdes typiques (grade 1) et atypiques (grade 2), en poursuivant les analogues

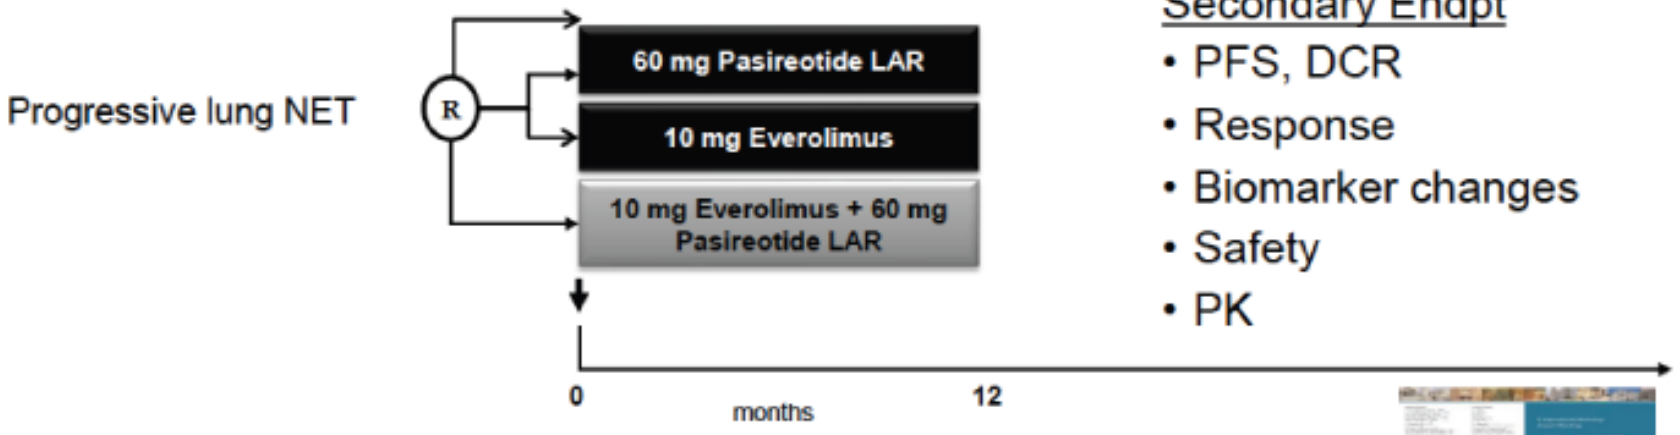
- Tumeurs non sécrétantes
  - traitement de seconde ligne après échec d'analogues si octreoscan positif
  - traitement de première ligne si octreoscan négatif?

- Pas d'indication en adjuvant

Quelle stratégie?

LUNA: Phase II Study in lung NET

- Advanced metastatic or inoperable lung or thymic NET Randomized multicenter phase II study
- 112 patients in 3 arms (28/arm)



Primary EndPt

- Proportion of pts. progression free at 12 months

Secondary Endpt

- PFS, DCR
- Response
- Biomarker changes
- Safety
- PK

Pasireotide

			P/CPT-11	PD		

Abbreviations: TC, typical carcinoid; AC, atypical carcinoid; PR, partial response; CR, complete response; SD, stable disease; PD, progressive disease; N/A, not available; DOC, docetaxel; E, etoposide; P, cisplatin; CAV, cyclophosphamide, doxorubicin and vincristine; C, carboplatin; PAC, paclitaxel; CPT-11, irinotecan; TRT, thoracic radiotherapy.

GEMOX et FOLFOX dans les carcinoïdes pulmonaires

- Analyse rétrospective de 42 patients atteints d'un carcinoïde pulmonaire métastatique, traités par GEMOX (n = 21) ou FOLFOX (n = 21)
- Carcinoïde typique (20 %) ; carcinoïde atypique (54 %) ; non précisé (26 %)
- 79 % progressifs avant de débuter la chimiothérapie
- Traitement en 1re ligne (19 %), 2e ligne (33 %) ou au delà de la 2e ligne (47 %)

	FOLFOX	GEMOX	Tous
Patients (n)	21	21	42
Nombre médian de cycles (range)	7 (1-12)	7 (4-11)	7 (1-12)
RO, n (%)	3 (14)	4 (19)	7 (17)
SD, n (%)	13 (62)	16 (76)	29 (69)
PD, n (%)	3 (14)	1 (5)	4 (9)
Not available, n (%)	2 (9)	0 (0)	2 (5)
SSP médiane, mois (IC)	14 (0-27)	17 (7-27)	14 (7-21)
SG médiane, mois (IC)	30 (13-45)	41 (9-62)	35 (21-49)

➜ **Le traitement par GEMOX ou FOLFOX semble prometteur dans les carcinoïdes pulmonaires**

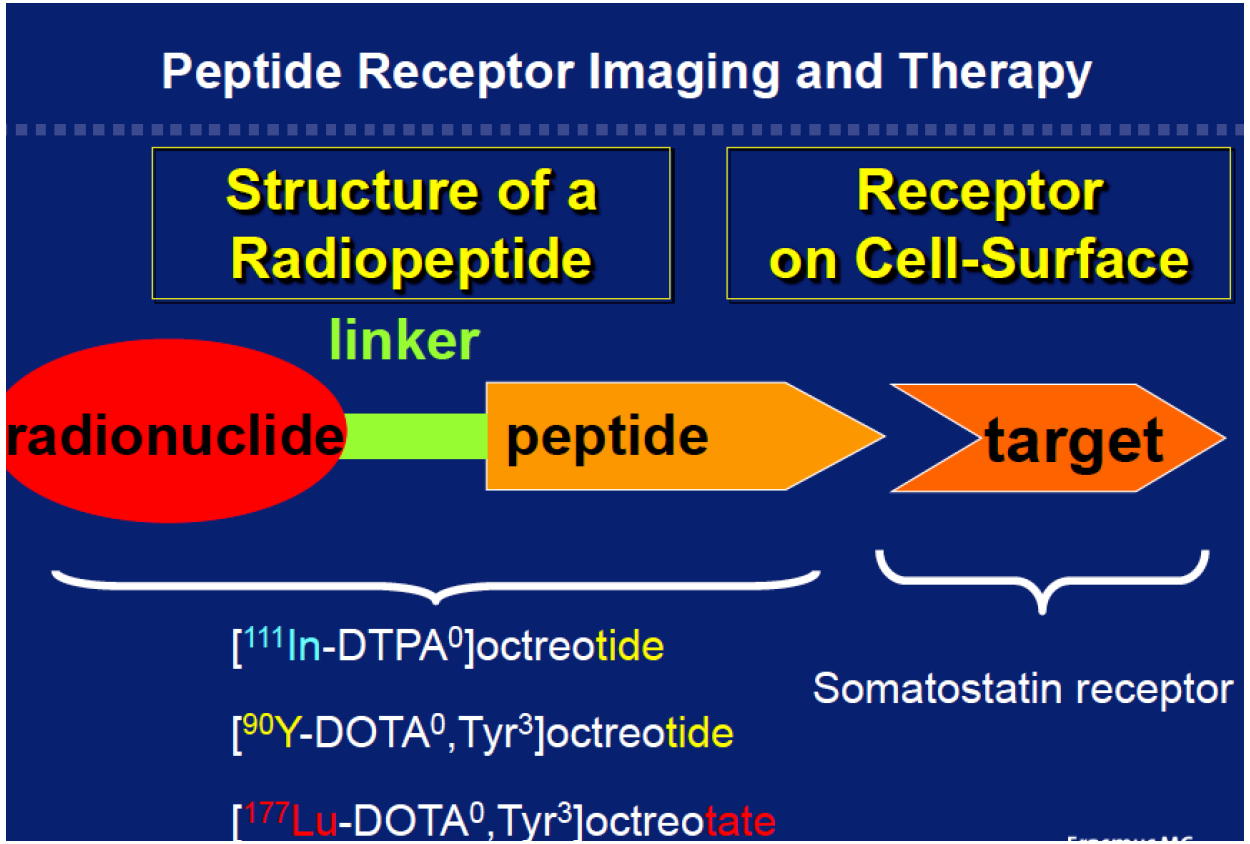
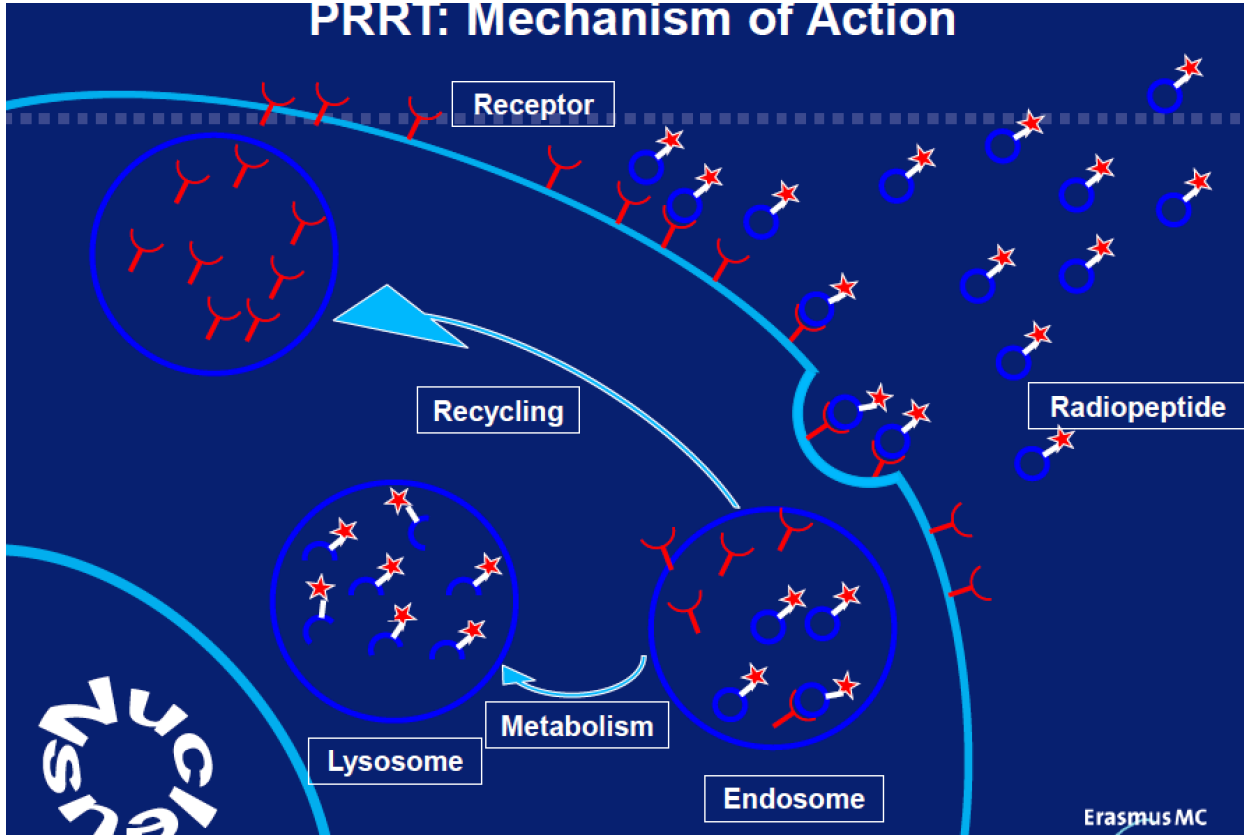
Tumeurs carcinoïdes avancées
Radiothérapie métabolique





Tumeurs carcinoïdes avancées
Radiothérapie métabolique

Indications:

- Tumeurs avancées, non opérables, métastatiques
- Hypermétabolisme en octreoscan, supérieur au tissu hépatique
- Pas de traitement antérieur par radiothérapie métabolique
- Hémogramme et fonction hépatique normaux

En pratique:

- Service de médecine nucléaire
- Bale, Rotterdam
- Anti-émétiques, perfusion de 30 min, hospitalisation 1 nuit

Plusieurs traceurs:

- [^{111}In-DTPA^{0}]octreotide
- [^{90}Y-DOTA^{0},Tyr^{3}]octreotide
- [^{90}Y-DOTA^{0}]lanreotide
- [^{177}Lu-DOTA^{0},Tyr^{3}]octreotate
- [^{177}Lu-DOTA^{0},Tyr^{3}]octreotide
- [^{90}Y-DOTA^{0},Tyr^{3}]octreotate

Tumeurs carcinoïdes avancées
Radiothérapie métabolique

PRRT: Adverse events

- ^{90}Y-DOTATOC: Renal insufficiency in 1-3.5% (3 studies); MDS in 2% of patients (1 study).
- ^{90}Y-DOTATOC: Renal insufficiency in 9% in 1 study; not all had amino acid protection; poor baseline kidney function not excluded.
- ^{177}Lu-DOTA-Octreotate: Renal insufficiency in 0.5%; MDS in 1% in 1 study.
- ^{177}Lu-DOTA-Octreotate update in 279 Dutch patients (long follow-up): 2 renal insufficiencies; 2 Leukemias (1 CML, 1 AML); 4 MDS; 1 pancytopenia > 6mo (2 bone marrow biopsies: no MDS). 9/279 = 3%

Réseau RENATEN

RENATEN – WEB-CONFÉRENCES

Renaten anime tous les mois une Réunion de Concertation Pluridisciplinaire ou RCP de recours nationale regroupant des experts dans le cadre d'une Web-conférence nationale.

ORGANISATION PRATIQUE DES WEB-CONFÉRENCES NATIONALES RENATEN

- Vous devez disposer d'un ordinateur avec une connexion internet et d'un téléphone
- Vous recevez les invitations aux web-conférences par mail, envoyé dans les 3 jours précédant la web-conf.
- Pour participer à la réunion :
  - lancez votre navigateur et activez l'URL http://renaten.adobeconnect.com/renaten/ puis cliquez sur « **qu'invité** »
- Pour rejoindre l'audioconférence à partir de votre téléphone:
  - composez ce **numéro unique** : **01 82 88 09 61**
  - Numéro de la salle: **3320118#**
  - suivant le téléphone que vous utilisez, il sera peut être nécessaire de taper * ou une autre combinaiso
- **Merci à chacun de penser à couper son micro lors des réunions pour éviter les bruits de fond de composant *6, pour ceux dont la manipulation crée une musique d'attente vous pouvez mettre en si téléphone en effectuant l'opération suivante** :
  - dans le module « liste des participants » cliquez sur l'icône ME METTRE EN SILENCE située à côté c sélectionnez l'option de mise en silence ou d'annulation de mise en silence de votre téléphone.

*** Pour toute question technique sur un point précis, vous pouvez joindre le support technique au nur 70 05 92**

* Si vous n'avez jamais participé à une réunion Adobe Connect :
  - Testez votre connexion : http://igr.adobeconnect.com/common/help/fr/support/meeting_test.htm
